

Weekly Report

Yuxin Ma

2017.04.05 - 2017.04.09

Projects

Spark Visualization

This week I checked what has left for this paper. The points are listed below:

- **Visual design** From the reviews several points should be addressed:
 - Scalability: The visual design should support at least hundreds of slave nodes.
 - Glyph: The glyph causes visual clutter in the projection view.
- **Case study** For case study, an example of larger scale is needed.

These points will be addressed in the next step of re-designing.

Besides, I have restored the Spark system on the computing cluster. The next task is to restore the performance monitoring tools to collect new data.

Plan for the Next Week

- Re-design the two views and implement them.
